Incredible comfort, surprisingly green.

The Beach Cabana at STAR Island Bahamas is a perfect combination of luxury and sustainable design.

An innovative getaway in the world's first off-grid island destination, the Beach Cabana is crafted for ultimate relaxation and care for the environment.

The building's unique design aims to maximize efficiency while offering unparalleled comfort and quality.

Beautiful and Inspired

Comfort and Luxury

The Beach Cabana is designed for 2-person occupancy, at 800 conditioned sq. ft.

Featuring a beach waterfront, private pool and extensive outdoor living areas furnished with luxury amenities, the Cabana is perfect for couples looking for an exclusive upscale experience - all guilt-free.

Unique and Smart

Clean Resources

The Beach Cabana features completely self-sufficient clean energy systems, such as solar and wind.

Each Cabana produces its own fresh water and has an individual hot water system, all with a zero-carbon footprint.

The Power System

The endless power of the Sun

Harvesting clean energy provided by the abundant Bahamian sunlight, the Cabana uses a sophisticated 5KW array of solar panels and 6KW Outback Inverters with state-of-the-art Aquion saltwater batteries that offer reliable off-grid energy day and night.

The Water System

Clean and fresh water

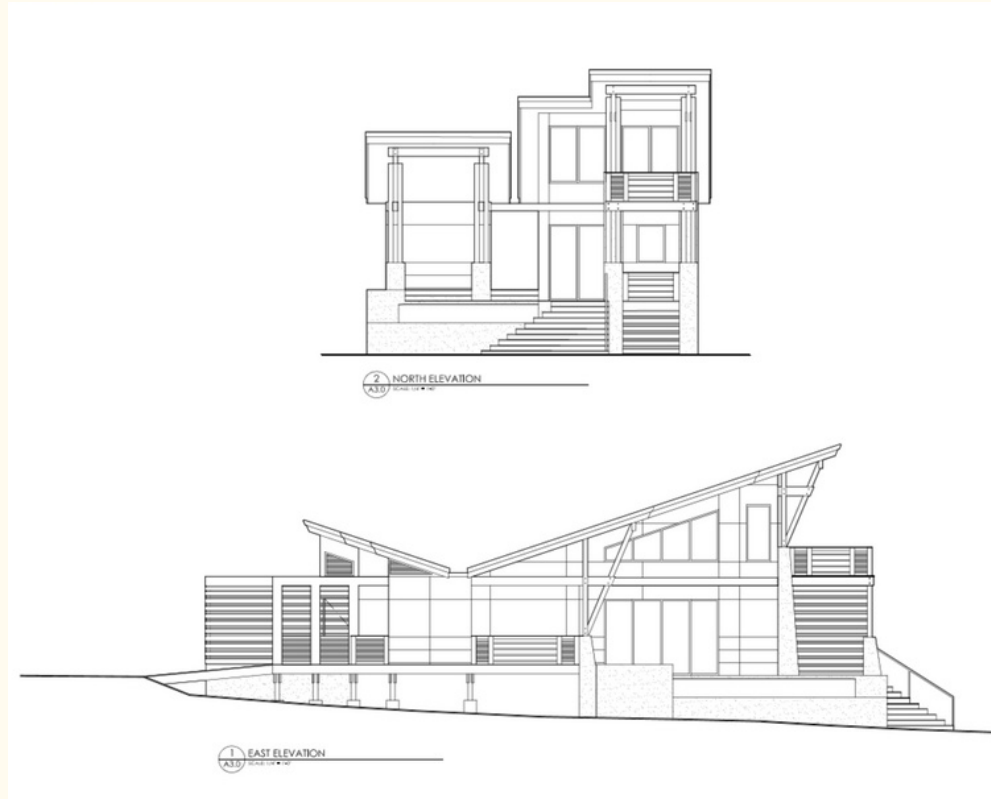

The Cabana's hot water is provided by AET's 80-gallon solar heater. Each unit also harvests and collects 2000 gallons of fresh rainwater that are highly purified by a RO system.

Both MicroFAST and Greyter Water Reuse systems handle wastewater management in an environmentally responsible way.

The Design

Every detail on the cabana's architectural design was conceived to maximize the use of renewable resources and delight the senses. From the flow of the lines to the careful placement of windows and roofing, the Beach Cabana was crafted to enhance the natural surroundings of our Bahamian paradise while taking advantage of everything our environment has to offer.
